

The modular 4-point spreading system enables direct fixing of the load to 4 points of rectangular or square constructions. The 4-point spreading system ensures the high stability of the load when lifting. Adapters enable the lengths of both sides to be increased/decreased in 0.5 m increments.

Suspension possibilities on request.

Load capacities: 110 t max.

4-point spreader system					
Load capacity in t	Length 1 in m	Length 2 m	Tare weight: Minimum to maximum size	The maximum load capacity is supported across the full length of the strut	Load capacity supported at maximum strut length
12	1 to 4	1 to 4	between 48 and 216 kg	12 t to 2 m	7 t at 4 m
24	1 to 6	1 to 6	between 64 and 704 kg	24 t to 2.5 m	8 t at 6 m
34	1 to 8	1 to 8	between 72 and 1,192 kg	34 t to 3 m	7 t at 8 m
50	1 to 10	1 to 10	between 448 and 3,220 kg	50 t to 4 m	11 t at 10 m
110	1 to 11	1 to 11	between 1,132 and 6,652 kg	110 t to 5.5 m	48 t at 11 m

Load capacities depend on L1 and L2. The lengths of the struts, L1 and L2, may vary within the specified load capacities.
