

Hydraulic machine jacks can be used in both a horizontal and a vertical position and are made of lightweight aluminium. The integrated safety valve protects against overload. Up to a weight of 18 t, the load can be lifted via the fork. If the load weight exceeds 20 t, the load can only be lifted via the head plate of the hydraulic jack.

Hydraulic machine jacks						
Load capacity in t	Min. fork clearance height in mm	Max. fork clearance height in mm	Head plate clearance height in mm	Max. lifting height in mm	Weight in kg	
12	73	-	-	152	21	
12	73	-	-	305	32
